Legislative Report

The Hawaii Legislature will adjourn in three weeks and here some of the bills that have died and others moving forward.

Bills that Died

Minimum Wage Proposal

This law could have increased to \$22.00 an hour in the next few years.

Vehicle Safety Checks

Payment would be every other year on vehicles 6 years or younger. BUT the fee would double.

Truck Weight

Trucks over 10, 000 GVW cannot drive on the left lane on H-1, H-2 or H-3.

Handyman Bill

The realtors proposal to increase the amount of a project to \$5000 for not needing a contractor's license. These unlicensed people do not pay workers compensation, license fees, recovery fund fees, GET, and does not even have to use a written contract. Realtors want it so they can close escrow fast with an unlicensed person.

Sublisting

If you are a state or county contractor (primary or subcontractor) there was a major battle to eliminate the sublisting and another against a two year UH "pilot" project with no listing for jobs under \$5,000,000.

Past Performance

To be used (instead of low bid) in selecting contractors for state and county work projects. Much discussion over the criteria government would use to evaluate. On the one hand they would have rated how timely the general paid his subs but on the other hand, they would only accept reports and input from the general contractor and not the sub who was paid late or not at all.

Bills Still Alive

Family Leave

It is likely to work similar to Temporary Disability Insurance paid for by BOTH employee and employer. The amount to be determined and applies to all employers even with one employee. Proposed not to start until 2020 but funding may begin sooner. Employee can use for care of a new child or family member. Proposed to pay 75% of wages for a maximum of 16 weeks. May not pass this year but it is likely to come.

Neighbor Island Half Percent Charge

Bill to allow the other three counties (Kauai, Maui and Big Island) to charge the additional one half of one per cent GET for rail (or other transportation projects) like Oahu, may pass. The neighbor island County Councils would have to authorize. Don't get caught like some Oahu businesses did when the rail tax went into effect and they had already signed long term contracts at 4% when the 4 1/2% tax took effect. Neighbor island members should fix your contracts now to state your price and then add "plus all applicable taxes".

Marijuana

A marijuana proposal that will not allow the employer to discharge, suspend or discriminate against an employee caught "stoned" but has a medical certificate. Almost any action for employment could wind up with a discrimination charge. Still illegal on the federal level but when it is legal on the state level, you are caught between.

The Silica Citations Hit 116 in Six Months

As of April 17, 2018, OSHA and state safety agencies have issued 116 national violation citations under OSHA's new silica safety rule, Bloomberg BNA reported. The regulation went into effect September 23, 2018, but OSHA began full enforcement October 23, 2018.

The most frequently mentioned violation involved contractors allegedly failing to measure silica levels, which was the subject of 35 citations. That was followed by 31 citations to those that did not comply with the regulation's Table 1, which identifies 18 procedures that firms can follow as an alternative to air monitoring.

Despite the issuance of citations, enforcement of the rule has been limited, with contractors being tagged for silica violations as part of investigations into other unsafe jobsite conditions like inadequate fall protection. The majority of violations (80%) were classified as serious, but the highest fine imposed was \$9,239—short of the potential maximum of \$12,934.

Even though OSHA postponed enforcement 30 days to allow more time for compliance, contractors still maintain that there are ambiguities and omissions in the rule that could lead to a citation. The National Association of Home Builders has submitted questions regarding the silica rule to OSHA in the hopes that the agency will beef up the compliance guidelines that it posted on its website at <https://www.osha.gov/dsg/topics/silica/crystalline/construction.html>.

The fall update to the silica standard was the first major change since it was established in 1971. The rule targets silica dust particles, which are 100 times smaller than sand granules. Those workers who breathe in too much silica dust can develop the fatal lung disease silicosis, lung cancer, kidney disease and chronic obstructive pulmonary disease.

New Products from Bella Pietra Design

Bella Pietra Design (Italian for “Beautiful Stone”) is Hawaii’s premier natural stone company offering the best selection and quality of natural stone materials for indoor and outdoor applications. Locally owned and operated, Bella Pietra Design specializes in globally-sourced marble, granite, slate, quartzite, travertine, limestone, coral stone, basalt lava and glass tile. Bella Pietra Design offers old world stone with contemporary elegance and Hawaiiana for projects ranging from remodels and apartments, to luxury island homes, department stores, and hotels. We work with Hawaii’s most renowned architects, interior designers and builders as well as homeowners from around the state, enhancing the value and beauty of every project we touch. We invite you to visit their showroom in Honolulu to experience the extensive selection of natural stone products and get to know their always helpful Bella Pietra Design team. As a Hawaii-based company, they believe in giving back to the islands where they live and work. When they are able to, they donate products and labor to Hawaii charitable organizations and nonprofits.

Sustainability Matters for Daltilo

Daltilo does everything to keep their processes as sustainable as possible, which means reusing, recycling and reducing solid materials and water used to manufacture their products.

- ◆ More than 98% of Daltilo's manufactured products contain pre-consumer (post-industrial) recycled materials.
- ◆ Daltilo has helped prevent an average of over 175 million pounds per year from ending up in our nation's landfills.
- ◆ Daltilo's corporate office has recycled over 340 tons of cardboard and office paper since 2003.
- ◆ Daltilo is currently preventing over 200 million pounds of solid waste from ending up in landfills.
- ◆ Five of their plants recycle and reuse 100% of wastewater generated in manufacturing.
- ◆ Manufacturing plants have reduced natural gas demand over 8% in the last two years.
- ◆ As of today, they are conserving enough to provide natural gas for over 6,0000 homes and electricity for over 1,700 homes annually.
